Systems Analyst-Data Architect, Corporate Office – Manitowoc, WI

GENERAL SUMMARY:

This position is responsible for designing and building data models that support Lakeside Foods business applications. This individual will participate in the development of business systems solutions including business process re-engineering, business requirement specifications, testing, and implementation tasks. Duties include responsibility for day to day operational support of business systems including on call rotation.

PRINCIPLE DUTIES AND RESPONSIBILITIES:

- Lead the development and implementation of various data architecture and reporting initiatives.
- Implement and document an enhanced data architecture that meets the needs of all functional business areas and maintain this architecture.
- Ensure the consistent use of Enterprise data within the applications and data warehouse data models.
- Oversee the mapping of data sources, data movement, interfaces and analytics, with the goal of ensuring data quality.
- Document enterprise data architectures and environments in order to maintain a current and accurate view of the global data landscape.
- Participate in the creation of business solutions by providing system analysis, design and development support with an emphasis on data modeling and data quality.
- Provide post production support to various internal business systems.
- Create effective project documentation as defined within the IT standard operation procedures, guidelines and best practices.
- Plan and prioritize work load to meet project schedules and the goals of the department.

SKILLS AND KNOWLEDGE:

- Knowledge of Business Intelligence and Data Warehousing concepts and proven experience delivering both.
- Strong understanding of reporting tools such as Business Objects suite of products (Web Intelligence, InfoView, Crystal Reports).
- Working knowledge of relational database design, logical data modeling, data warehousing and relational data base design.
- Working knowledge of ETL concepts, design and development.
- Proficient in SQL data base.
- Background in creating subject-area data marts and performance monitoring systems.
- Strong organization, analytical, and problem-solving skills.

- Demonstrated time management and prioritization skills.
- Demonstrated ability to work in a team environment: Ability to share ideas, work with and assist other members to ensure the success of the team.
- Strong interpersonal skills. Ability to communicate effectively in writing and verbally. Ability to influence without authority.
- Basic understanding of programming languages.

Must have a Bachelor's degree in a computer related field or Associate Degree in a computer related field plus 5 or more years experience. Experience in a data architecture related field is a plus.

This position will pay a wage negotiable based upon knowledge, experience, skill, and work ethic. This position also includes a full benefit package.
